► This corrects the article “Plasma Oligomeric Beta Amyloid in Alzheimer's Disease with History of Agent Orange Exposure” in volume 17 on page 41.

Dement Neurocogn Disord. 2018;17(2):41-49 / <https://doi.org/10.12779/dnd.2018.17.2.41>

Unfortunately, the original version of this article contained an error in **Table 1**.

Table 1 shows basic demographic characteristics of the AD patient group with Agent Orange exposure (n = 48), without Agent Orange (n = 66), and the group of participants without AD (n = 60). In this table, values of apolipoprotein E ε4 genetic variance (homozygote or heterozygote) 38 (57.5%) and 27 (56.2%) were swapped with each other. There was no statistically significant difference. Likewise, 38 (57.5%) and 27 (56.2%) in **Table 1** should be changed to 27 (56.2%) and 38 (57.5%).

The correct table is shown below (revised values indicated bold-face font):

Table 1. Baseline characteristics

Characteristics	AD with AO (n=48)	AD without AO (n=66)	NC (n=60)	p value
Age (yr)	70.6±7.6	69.8±6.4	68.1±7.3	0.7145
Male (%)	60 (90.9%)	47 (97.9%)	53 (88.3%)	0.064
Education (yr)	10.1±3.0	9.9±4.8	11.1±2.8	0.297
MMSE score (median)	17	18	29	<0.0001
ApoE ε4 carrier	27 (56.2%)	38 (57.5%)	8 (13.3%)	0.011

AD: Alzheimer's disease, AO: Agent Orange exposure, NC: normal controls, MMSE: Mini-Mental State Examination.
